"This was a good session for the climate, especially when it comes to transportation electrification. The passage of the Clean Fuels Act and the Clean Cars Tax Credit, combined with the passage of Clean Cars and Trucks rules in the Fall, mean that individuals, utilities, governments and tribes can further invest in buying and building out the infrastructure to clean up transportation pollution. But we also passed legislation to further develop geothermal, solar and renewable energy storage. And we saw serious investments in land and water conservation, funding apprenticeships key to developing the energy transition workforce, and creating a match fund to help bring federal climate solutions dollars to the state." **Camilla Feibelman, Sierra Club Rio Grande Chapter Director**
